The Pre-eminent Position of Baker Electrics has again been demonstrated

On August 30th, 1910, a BAKER ELECTRIC shaft driven Victoria, equipped with forty cells of A-6 Edison battery, was driven 201.6 miles at an average speed of 1234 miles per hour through such streets and roads in and about Cleveland as would be met in the ordinary daily use of a Car.

The entire run was made under the personal observation of Chas. G. Steinhauer, automobile editor of the Cleveland Leader. The previous record of 160.8 miles was made July 29th, 1907, by a Baker Electric equipped with a standard lead plate battery. This performance has never been equaled by any other Car.

The mechanical and electrical PERFECTION and the ABSENCE OF FRICTION in a BAKER ELECTRIC, combined with an EDISON BATTERY, is responsible for this phenomenal and unequaled performance, and again our claim is substantiated that with corresponding equipment, a BAKER will make MORE MILES at a GREATER speed than any other Electric Car in the world.

No other car can approach this record, for no other Car can be operated with so little current consumption at a given speed and so great efficiency. This performance also demonstrates the superiority of the BEVEL GEAR SHAFT DRIVE over any other type of

It will greatly interest you to learn the total cost of operation and up keep of Baker Electric Vehicles in the city of Richmond. Further particulars can be obtained by telephoning Madison 7060, or addressing
